

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFACE.

It is not yet a settled question whether a Key to a Mathematical work is an aid or a hindrance. The diversity of opinion which exists on this point doubtless arises from the different *uses* to which a Key is applied. A Key should never be used to supersede investigation and labor; but always to turn the former into right channels, and to make the latter more available and effective.

How to study—how to investigate—how to labor, and how to teach, are the great questions; and it is these which a Key should answer.

It is not results alone that give value to a Key; but it is the explanation of methods—the examination of principles applied in the solution of problems, and a general and minute analysis of such questions as contain within themselves the germs of science.

It is also the province of a Key to lessen the *mechanical labor* of Teaching. Amid the various and complicated duties of the school-room, the teacher can

scarcely find time to work out every question on the slate or blackboard. In the Key he not only finds the best forms of analysis, but also the best arrangement of the work to be done ; hence, he has a standard to which the work of his pupils should conform. He has only to guard against the danger of permitting his Key to become *a substitute* for a full and thorough investigation on his part, and he will avail himself of the general analysis and the best practical methods, without at all interfering with the independent operations of his own mind.

Great care has been taken to make a full and complete analysis of every question whose solution presents a new principle ; and so to construct the analysis as to make that principle most apparent. It is believed that all the important forms of analysis have been given, and that all the classes of practical questions have been considered.

$\frac{3}{7}$ of \$6300 = \$2700 A's share; $\frac{4}{5}$ of \$6300 = \$2800 B's share;
 2700 + 2800 = \$5500; 6300 - 5500 = \$800, C's share. *Ans.*

(23)

$\frac{3}{4} - \frac{3}{5} = \frac{3}{20}$; $1 - \frac{3}{20} = \frac{17}{20}$; since 1 diminished by $\frac{3}{20}$ of itself leaves $\frac{17}{20}$ of itself, *any number* diminished by $\frac{3}{20}$ of itself will leave $\frac{17}{20}$ of itself; hence, 34 is $\frac{17}{20}$ of the required number;

As each son was to have but one half as much as the mother, so the surviving son will have but one part, while the mother will have two parts of the legacy, or the son will have $\frac{1}{3}$ and the mother $\frac{2}{3}$ of \$4500.

(8)

A, B and C's shares of the gain is $\frac{13167}{15000} = \frac{4389}{5000}$ of the whole gain ; therefore, D's share of the gain is $\frac{611}{5000}$ of the whole gain ; and, as his capital will be the same part of the whole capital as his gain is of the whole gain, \$5499 must be $\frac{611}{5000}$ of the whole capital or stock, which will give \$45000 for the whole stock ; and as the whole gain is to each man's gain as the whole stock is to each man's stock, therefore,

$$15000 : 4320,50 : : 45000 : x = \$12961,50 \text{ A's stock.}$$

$$15000 : 5245,75 : : 45000 : x = \$15737,25 \text{ B's stock.}$$

$$15000 : 3600,75 : : 45000 : x = \$10802,25 \text{ C's stock.}$$

$$\$15000 - 13167 = \$1833 \text{ D's gain.}$$

(9)

A owned $\frac{3}{12}$, B $\frac{4}{12}$, and C $\frac{5}{12}$ of the mill ; $4300 - 2500 =$
\$1800 the whole loss.

$$12 : 3 : 1800 : x = 450 \text{ A's loss.}$$

$$12 : 4 : 1800 : x = 600 \text{ B's loss.}$$

$$12 : 5 : 1800 : x = 750 \text{ C's loss.}$$

(10)

$5+7+8=20$; then A must have $\frac{5}{20}$, B $\frac{7}{20}$, and C $\frac{8}{20}$ of
\$16970.

$$20 : 5 : 16970 : x = \$4242,50 \text{ A's stock.}$$

$$20 : 7 : 16970 : x = \$5939,50 \text{ B's stock.}$$

$$20 : 8 : 16970 : x = \$6788 \text{ C's stock.}$$

C's stock, \$6788, is equal to the whole gain, and each must have the same part of the whole gain as of the whole stock.

$$20 : 5 : : 6788 : x = \$1697 \text{ A's gain.}$$

$$20 : 7 : : 6788 : x = \$2375,80 \text{ B's gain.}$$

$$20 : 8 : : 6788 : x = \$2715,20 \text{ C's gain.}$$

(11)

$$475,50 + 362,125 + 250,875 + 140 = \$1228,50.$$

$$1228,50 : 475,50 :: 614,25 : x = \$237,75 \quad \text{A's.}$$

Then the four persons agreed to do 83 parts of the work, of which A would do 25, B 20, C 15, and D 21, and each must therefore receive like parts of the amount paid.

$$83 : 27 :: 270 : x = \$87,831 + \quad \text{A's.}$$

$$83 : 20 :: 270 : x = \$65,060 + \quad \text{B's.}$$

$$83 : 15 :: 270 : x = \$48,795 + \quad \text{C's.}$$

$$83 : 21 :: 270 : x = \$68,313 + \quad \text{D's.}$$

(14)

$$5 + 6 + 7 = 18, \text{ the proportional number of shares.}$$

But since each share is taken twice, 18 denotes *twice* the number of shares ; hence, the number of shares is denoted by 9.

Now, the sum of the 1st and 2d shares is 5, that of the 1st and 3d, 6, and that of the 2d and 3d, 7 ; therefore, the second share is greater by 1 than the first, and the third, 1 greater than the second ; hence, the shares, taken in order, differ from each other by 1, and since the sum is 9 ; 2, 3, and 4 denote the respective shares.

$$9 : 2 :: 4569 : x = \$1015,33\frac{1}{3} \text{ the first.}$$

$$9 : 3 :: 4569 : x = \$1523, \text{ the second.}$$

$$9 : 4 :: 4569 : x = \$2030,66\frac{2}{3} \text{ the third.}$$

(2)

B received $\frac{21}{90} \times 120000 = \frac{21}{3} \times 10000 = 70000$ of the whole gain, and A $\frac{30}{90}$; hence B put in $\frac{21}{90}$ of the whole stock, and A $\frac{30}{90}$. A's stock was in one year. $10000 \times 12 = 120000$; then \$120000 is $\frac{30}{90}$ of the whole stock, from which we find $\frac{21}{90}$ or B's share of the stock to be \$84000, which, was in trade 8 months, and equivalent to 1500 barrels of flour; $84000 \div 8 = 10500$, B's capital, and equal to 1500 barrels of flour; $10500 \div 1500 = \$7$ per barrel.

(5)

If C's gain is $\frac{1}{2}$ and E's $\frac{6}{12}$ of the whole, then D's must be $\frac{5}{12}$ of the whole; then E's share of the gain is to D's, as E's stock for the time it was in trade, is to D's stock for the time it was in trade, and the same for C's; hence,

If \$600 accrue from \$480 in 6 months, the gain, \$120, would be equal to $\frac{1}{4}$ the stock, and in 12 months it would be twice as much, or $\frac{1}{2}$ the stock; therefore, \$1200, B's stock and gain for 12 months, is $\frac{3}{4}$ of his stock, from which we obtain \$800 for B's stock.

Then B's stock is to C's stock, as B's gain for 12 months is to C's gain for the same time, or

The grindstone is a cylinder whose base is either of the two side circles, and altitude the thickness of the stone. After the first third is ground off, the remainder is a cylinder whose altitude is the thickness of the stone, and base two-thirds that of the largest circle ; and these cylinders having the same altitude, are to each other as their bases.

As two similar figures are to each other as the squares of their like dimensions, two circles are to each other as the squares of their diameters or radii ; that is, the square of the radius of the second circle will be two-thirds the square of the largest radius, and the square of the radius of the inner circle will be one-third the square of the largest.

Then, $(24)^2 = 576$; $576 \div 3 = 192 \text{sq. in.}$; $576 - 192 = 384$, the square of the middle radius ; and $\sqrt{384} = 19.595$ = the radius of what is left after the first has ground off his share ;
 $24 - 19.595 = 4.405 \text{in.}$, the thickness of the first share.

Also, $384 - 192 = 192$; $\sqrt{192} = 13.856 \text{in.} +$, the inner radius ; $19.595 - 13.856 = 5.739 \text{in.}$, the thickness of the second share ; and, 13.856, already found, is the thickness of the third share.

2d. What is the amount and rate of premium when the notes for it, are at 6 months, and 10 per cent. discount ?

First, $.0508\frac{1}{2} =$ interest on \$1.00 for 6mo. *Sda.* at 10 per cent., and $\$1.00 - .0508\frac{1}{2} = .9491\frac{1}{2}$; hence, we have $1.00 : .9491\frac{1}{2} :: 14946.02 : \$14186.264 =$ what must be paid for £3000 at the required premium; and $14186.264 - 13333.333 = \$852.931 =$ the required premium. Now, as \$1000 constituted the premium when the rate was $7\frac{1}{2}$ per cent., it is evident that when the premium is less, the rate of that premium will also be less. A, B and C did $\frac{4}{10}$ of the work in 4 days, B and C $\frac{3}{10}$ in 5 days, and C $\frac{3}{10}$ in $11\frac{1}{4}$ days. In 1 day C will do $\frac{2}{75}$ of the work, and it will take him as many days to do the whole work as $\frac{75}{2}$ is contained times in 1, which is $37\frac{1}{2}$ days.

B and C can do $\frac{3}{50}$ of the work in 1 day, $\frac{3}{50} - \frac{2}{75} = \frac{1}{30}$ what B can do alone in 1 day, and it will take him as many days to do the whole work as $\frac{1}{30}$ is contained times in 1, which is 30 days.

A, B and C can do $\frac{1}{10}$ of the work in 1 day ; $\frac{1}{10} - \frac{3}{50} = \frac{2}{50}$ what A can do in 1 day, and it will take him as many days to do the whole work as $\frac{50}{2}$ is contained times in 1, which is 25 days. Then it will take A 25 days, B 30 days, and C $37\frac{1}{2}$ days.

Find the present worth of \$1 for 1, 2, 3, 4 and 5 years respectively, giving \$0.93457943 +, \$0.87719298 +, 0.82644628 +, \$0.78125, \$0.74074074 + ; the sum of these will be \$4.16020943 +, which is the amount to be divided in such a manner that the quotients shall denote the parts of \$1 of the principal, which, according to the conditions of the question, must be paid each year, and which, put at interest at 7 per cent., will produce \$1, or equal amounts at the end of their respective times. Then there must be paid 1500 like parts of \$1 of the principal, for each year respectively, which, put at interest as above stated, will give equal amounts.

$$\$0.93457943 \div 4.16020943 \times 1500 = \$336.9705.$$

$$\$0.87719298 \div 4.16020942 \times 1500 = \$316.2795.$$

$$\$0.82644628 \div 4.16020943 \times 1500 = \$297.9810.$$

$$\$0.78125000 \div 4.16020943 \times 1500 = \$281.6850.$$

$$\$0.74074074 \div 4.16020943 \times 1500 = \$267.0795.$$

The above parts of the principal, if put at interest at 7 per cent. for 1, 2, 3, 4 and 5 years respectively, will amount to equal sums, or \$360,56 nearly, which will be the annual payment.

LAWS OF FALLING BODIES.

(1)

$$16\frac{1}{2} + 11 \times 32\frac{1}{8} = 369\frac{1}{2} \text{ feet.}$$

$$16\frac{1}{2} \times 144 = 2316 \text{ feet.}$$

(2)

$$16\frac{1}{2} \times 15 \times 15 = 3618\frac{3}{4} \text{ feet.}$$

$$32\frac{1}{8} \times 15 = 482\frac{1}{2} \text{ feet.}$$

(3)

The velocity = $\sqrt{2 \times 32\frac{1}{8} \times \text{height of fall}}$. Therefore, the
120 squared = $2 \times 32\frac{1}{8} \times \text{height of fall}$. Hence, height of fall
= $120 \times 120 \div 2 \times 32\frac{1}{8} = 223\frac{1}{2}$ feet. *Ans.*

(4)

$100 = 16\frac{1}{2} \times \text{square of number of seconds}$. Therefore, num-

(5)

$$16\frac{1}{2} \times 100 = 1608\frac{1}{2} \text{ feet, the space.}$$

$$32\frac{1}{8} \times 10 = 321\frac{1}{4} = \text{the velocity.}$$

(6)

$1000 \times 1000 = 2 \times 32\frac{1}{8} \times \text{height}$. Therefore, the height =
 $1000000 \div 64\frac{1}{4} = 15544\frac{8}{153} \text{ ft.} = 2 \text{ mi. } 4984\frac{8}{153} \text{ ft.}$

(9)

$160 \times 160 = 2 \times 32\frac{1}{2} \times \text{height}$. Therefore, height = $160 \times 160 \div 64\frac{1}{2} = 397\frac{17}{32}$ ft. ; $160 = 32\frac{1}{2} \times \text{time of ascent}$. Therefore, time of ascent = $160 \div 32\frac{1}{2} = 4\frac{8}{9}$ sec.

(10)

$32\frac{1}{2} \times 5 = 160\frac{5}{8}$ ft. = velocity of projection ; $160\frac{5}{8} \times 160\frac{5}{8} = 64\frac{1}{2} \times \text{height}$. Therefore, height = $160\frac{5}{8} \times 160\frac{5}{8} \div 64\frac{1}{2} = 402\frac{19}{31}$ feet.

(11)

$$32\frac{1}{2} \times 45 = 1447.5 \text{ feet. } \textit{Ans.}$$

(12)

$1970 = 32\frac{1}{2} \times \text{time of fall}$. Therefore, number of seconds of fall = $1970 \div 32\frac{1}{2} = 61.24$ sec.

(13)

$3280 = 16\frac{1}{2} \times \text{number of seconds squared}$. Therefore, square of number of seconds = $3280 \div 16\frac{1}{2} = 203.9377$ +. Therefore, number of seconds = $\sqrt{203.9377} = 14.28$ +.

(14)

$984 \times 984 = 2 \times 32\frac{1}{2} \times \text{height}$. Therefore, height = $984 \times 984 \div 64\frac{1}{2} = 15050\frac{1}{3}$ feet.

(15)

$386 = 32\frac{1}{2} \times \text{number of seconds}$. Therefore, number of seconds = $386 \div 32\frac{1}{2} = 12$; height = $16\frac{1}{2} \times 12 \times 12 = 2316$ feet.

 $925 \text{ oz.} : 2240 \times 16 \text{ oz.} :: 1 \text{ cubic foot} : 38\frac{1}{8}\frac{3}{4} \text{ cubic feet.}$

(3)

The compound weighs in air $50 + 390 = 440 \text{ oz.}$ The weight of an equal volume of water is $440 - 344 = 96 \text{ oz.}$ The weight of a volume of water equal to volume of the copper is $390 - 345 = 45 \text{ oz.}$ Therefore, weight of volume of water equal to volume of the wax is $96 - 45 = 51 \text{ oz.}$ Specific gravity of the pumice stone $= 50 \div 51 = .980.$

(4)

Since the weight of the ice and of the displaced water are equal, we have $20.45 \times 15.75 \times 10.5 \times .930 = 20.45 \times 15.75 \times \text{height of displaced prism of water} \times 1.026.$ Then, by cancelling, $10.5 \times .930 = \text{height} \times 1.026;$ hence, $\text{height} = 10.5 \times .930 \div 1.026 = 9.517 \text{ yd.}$ Therefore, $10.5 - 9.517 = .983 \text{ yd.} = \text{height of ice above the surface} = 2 \text{ ft. } 11.383 \text{ in.}$

(5)

$6043 \times 63 = 380709 \text{ lb.} = 190 \text{ T. } 709 \text{ lb.} = \text{weight of vessel.}$

(6)

$33 - 21 = 12 = \text{weight of an equal volume of water.}$
 $33 \div 12 = 2.75 = \text{specific gravity.}$

(7)

$17 \div 2.35 = 7.234 = \text{specific gravity.}$

(8)

$$250 \div 318 = .786 = \text{specific gravity of the alcohol.}$$

(9)

$$14 - 8 = 6 = \text{weight of water; } 13.25 - 8 = 5.25 = \text{weight of brandy; } 5.25 \div 6 = .875 = \text{specific gravity.}$$

(10)

$$2.837 \times 1000 = 2837 \text{ oz.} = 177 \text{ lb. } 5 \text{ oz}$$

(11)

$$36.4 \div 33 = 1.103 = \text{specific gravity.}$$

(12)

$$\frac{1000}{1728} \text{ oz.} = \text{weight of a cubic inch of standard water.}$$

$$4 \times 3.1416 \times \text{height of mercury} \times \frac{1000}{1728} \times 13.596 = 26.2 \times 16 \text{ oz.}$$

$$\text{Therefore, height of mercury} = \frac{26.2 \times 16 \times 1728}{4 \times 3.1416 \times 1000 \times 13.596} = 4.23 \text{ in.}$$

(13)

$$7.55 - 5.17 = 2.38 \text{ gr.} = \text{weight of displaced water.}$$

$$7.55 - 6.35 = 1.20 \text{ gr.} = \text{ " " liquid.}$$

$$7.55 \div 2.38 = 3.172 = \text{specific gravity of alabaster.}$$

$$1.20 - 2.38 = .504 = \text{ " " liquid.}$$

(14)

$$\frac{1000}{1728} \text{ oz.} \times 21.5 = 12.442 \text{ oz.} = \text{weight of cubic inch of platinum.}$$

$$\frac{1000}{1728} \text{ oz.} \times 13.6 = 7.870 \text{ oz.} = \text{ " " " mercury.}$$

$$12.442 - 7.870 = 4.572 \text{ oz.} = \text{required effort.}$$

(15)

$$3.1416 \times 81 \times \frac{34}{3} \text{ cubic inches} = \text{volume of cone.}$$

$$3.1416 \times 81 \times \frac{34}{3} \times \frac{1000}{1728} \text{ oz.} \times 13.596 = 1418 \text{ lb. } 3.3841 \text{ oz.}$$

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in financial reporting and compliance with regulatory requirements. The text notes that incomplete or inaccurate records can lead to significant legal and financial consequences for the organization.

2. The second part of the document outlines the various methods and tools used to collect and analyze data. It highlights the use of advanced software solutions and manual data entry processes to ensure the integrity and accuracy of the information. The document also discusses the importance of data security and the implementation of robust protocols to protect sensitive information from unauthorized access and breaches.

3. The third part of the document focuses on the analysis and interpretation of the collected data. It describes how statistical methods and data visualization techniques are employed to identify trends, patterns, and anomalies within the dataset. The text stresses that a thorough understanding of the data is crucial for making informed decisions and developing effective strategies to address organizational challenges.

4. The final part of the document provides a summary of the key findings and conclusions drawn from the analysis. It reiterates the importance of ongoing monitoring and evaluation to ensure that the data remains relevant and up-to-date. The document concludes by emphasizing the commitment to continuous improvement and the pursuit of excellence in all aspects of the organization's operations.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both primary and secondary data collection techniques. The primary data was gathered through direct observation and interviews with key stakeholders. Secondary data was obtained from existing reports and databases.

The third section details the statistical analysis performed on the collected data. This involves the use of descriptive statistics to summarize the data and inferential statistics to test hypotheses. The results show a clear trend in the data, which is consistent with the initial research objectives.

Finally, the document concludes with a series of recommendations based on the findings. These recommendations are designed to address the identified issues and improve the overall process. It is hoped that these suggestions will be helpful in achieving the desired outcomes.
